## **FOR IMMEDIATE RELEASE**

### **Augmentix™ Corp. has been awarded a GSA Contract for Rugged Servers, Enabling Federal Agency Purchases through GSA Advantage Program.**

**(Austin, TX) May 24, 2007** - Augmentix Corporation, a leader in rugged computing solutions for demanding environments, has been awarded a contract through the United States General Services Administration (GSA) to sell its family of rugged servers through GSA's Advantage® Program ([GSA Contract #:GS-35F-0158T](#)).

The GSA Advantage Program is the federal government's online catalog, information and ordering system which gives its users the ability to quickly search for, compare and order products and services which meet their specific program requirements. Over one million Federal customers each week use the GSA Advantage system.

"Securing our own GSA contract will make it easier and faster for our government clients to source and buy our rugged solutions", said Stephan Godevais, President and CEO, Augmentix Corp. "This is important as more Federal customers are buying our rugged server solutions due to their superior quality and reliability".

Augmentix has been selling its family of rugged servers to federal agencies since 2003 and has gained a reputation for outstanding quality and reliability. All of Augmentix's servers combine best-in-class platforms and standardized components from industry leader Dell™, with unique ruggedization technologies from Augmentix. In addition, each product has been designed and independently tested to meet stringent military standards and operate reliably while withstanding the harshest environments – extreme temperatures, contaminants, moisture, shock, vibrations, dust and other harsh conditions.

Augmentix also delivers superior server availability through its innovative management solution. The Server Availability Management Processor technology (SAMP) is a patent-pending on-board computer that monitors and can autonomously "heal" specific server failures in the field. The SAMP can deliver up to 5% additional uptime in remote mission-critical applications.

Augmentix products available on GSA Advantage (<https://www.augmentix.com/GSA>) GSA Contract #:GS-35F-0158T.

#### **About Augmentix**

*Augmentix Corp. ([www.augmentix.com](http://www.augmentix.com)) provides the military, telecommunications, and industrial industries with mission-critical computing solutions for applications in the harshest environments. Augmentix servers and mobile products are based on best-in-class technologies and standardized architecture components from industry leader Dell. Augmentix A+ rugged servers include the patent-pending Server Availability Management Processor system and innovative board and packaging designs that create environmentally robust, high availability servers that fit into the most compact spaces while withstanding extreme temperatures, contaminants, moisture, dust, shock, vibration and other harsh conditions. The company is headquartered in Austin, TX and offers global service and support.*
